[LinkedIn](#) | [GitHub](#)

Professional Summary

Data Analyst with a strong foundation in product analytics, market evaluation, and performance intelligence. Experienced in cleaning and structuring raw datasets, identifying statistically meaningful trends, and translating insights into strategic recommendations. Skilled in SQL, Power BI, Excel, and Python for building automated dashboards, KPI frameworks, and analytical models that support pricing, product prioritization, and operational decisions. Strong interest in understanding consumer behavior and market dynamics behind technology-driven products.

Skills

Technical Skills: SQL | MySQL | Python (Pandas, NumPy) | Power BI (DAX, Power Query) | Advanced Excel

Analytics & Reporting: KPI Design | Data Cleaning | Trend & Spend Analysis | Forecasting | Dashboard Automation | Business Reporting

Tools: Git | GitHub | Streamlit

Business & Strategy: Requirement Gathering | Stakeholder Communication | Gap Analysis | Process Analysis

Projects

Amazon Sales Performance Analysis | SQL, MySQL, Power BI | [Github](#)

- Consolidated 1,000+ multi-branch sales records into structured analytical tables for revenue and pricing analysis
- Designed KPI framework tracking revenue contribution, pricing impact, and demand shifts across segments
- Identified ~12% revenue leakage through segment-level performance diagnostics
- Automated dashboards reducing manual reporting effort by 70% and accelerating decision cycles

Supplier Quality & Procurement Analytics Platform | Power BI, DAX, Power Query | [Github](#)

- Analyzed 1,300+ supplier samples to evaluate defect rates, cost efficiency, and sourcing reliability
- Applied correlation analysis to measure defect impact on supplier performance scoring
- Built benchmarking dashboards ranking suppliers by risk exposure, specialty performance, and cost factors
- Automated data workflows cutting manual processing by 60% and improving procurement decisions

Operational Performance & Risk Monitoring Dashboard | Python, Pandas, Streamlit | [Github](#)

- Processed and cleaned 15,000+ operational event logs to analyze usage trends and peak load behavior
- Engineered KPIs for system efficiency, anomaly frequency, and operational bottlenecks
- Implemented anomaly detection logic to proactively flag abnormal usage patterns
- Built real-time dashboards reducing manual analysis effort by 80% and improving response time

Certifications

Certified Data Science Professional | Odin School

Introduction to SQL | IBM (via edX)

Cybersecurity Essentials | Cisco Networking Academy

AWS Cloud Technical Essentials | Amazon Web Services (edX)

Education

B.Tech – Artificial Intelligence & Data Science

Vignan's Institute of Information Technology | 2021–2025

CGPA: 7.33/10
